Elements of the Recall:

Independent testing has highlighted that there are some potential areas of risk with these cots. The testing also found labelling and instruction documentation that are not compliant with the mandatory safety standard for cots.

- 1) Attached is a new assembly instruction book – for any future assembly - and a new set of labels for the base of your cot. The instructions for affixing the labels are in this booklet.
- 2) On some batches a potential snag hazard has been identified. Please have a look at page 3 (figure 3) and determine if that applies in your cot. If it does then either;
 - a. Follow the instructions to remedy the potential problem or,
 - b. Drop the cot ends to a store and we will arrange for the remedy to be undertaken or,
 - c. Advise us that the potential snag hazard exists and that you can't achieve a) or b) above and we will arrange to come to you.
- 3) On a test a split occurred on the side rail of the mattress base. Please inspect as per page 6. If there are any splits in your cot please advise and we will replace the base.

Labels

You will have been given 5 labels. Attach these on the top side of the mattress base slats as shown. (Fig. 1)

Fig. 1

On the inside top of the drop-side there may be a label that says: "Face this side inwards". Please **remove** this label. (It may be a choking hazard if your child removes it.) (Fig. 2)

Possible Snag Hazard

Fig. 3

If your cot looks like the above image (Fig. 3) with the drop-side **fully raised** there could be a possible snag hazard.

If there is a gap, follow steps a)-i) to fix this issue.

- a) Using a Phillips screwdriver, **unscrew** the drop-side stoppers at the base of the two headboards. (Fig. 4

Fig. 4

3

- b) **Remove** drop-side by sliding it down off the drop-side guides.
- c) With a pencil, **draw** lines along the outer edges of both top drop-side guides as per below. **Draw** an "X" on the top of drop-side guides. (This will help you when repositioning the guides.) (Fig. 5)

- d) Using a Phillips screwdriver, **remove** both top drop-side guides on each headboard.
- e) Using a ruler or measuring tape, **measure** 1.5cm (15mm) higher than top pencil lines on both sides of cot, and **draw** new pencil lines parallel to the old ones. (Fig. 6)

- f) Now **position** one drop-side guide against a headboard, so that the top of X-marked side aligns with the new pencil line (1.5cm [15mm] higher than the old one). Make sure the side of the guide aligns with the side pencil marks. Once in position, **screw** guide into place. **Repeat** this step for the other side.
- g) Put drop-side back on cot. To do this, **align** it with the top and bottom guides, then **slide** up into place.
- h) **Screw** drop-side stoppers back into place. See image in step 1. (Fig. 4)
- i) **Raise** the drop-side to the **fully raised** position and your cot should now look like this (with no snag hazard). (Fig. 7)

Possible Base Split

Please inspect your cot at each of the 4 points that the mattress base is attached to the ends of the cot. (Fig 8)

Check that there are no splits in the timber.

If there are any splits please email cotrecall@babycity.co.nz with your details. If you don't have access to email then please phone 0800 282 2582
